YOUR CURRENT PROPERTIES & MORTGAGES

#### Variable rate characteristics:

• The variable interest rate and its repayment amount may increase while the loan is on a variable rate.

#### **Fixed rate characteristics:**

- Fix interest rate is fixed at a point in time and client(s) will not benefit from subsequent market interest rate reductions during the initial fixed rate period.
- Your interest rate may change between submitting an application and the loan settling. The Bank's 'rate lock' feature can guarantee your fixed interest rate in case fixed interest rates increase. This will lock in the interest rate of your fixed interest home loan before your loan application settles. You should remember that your lender may charge a rate lock fee (usually 0.10% of the fixed rate home loan amount).
- Limited or no ability to make additional repayments while the interest rate is fixed.
- May not have the ability to redraw or utilise an offset account to reduce the home loan interest expense.
- Possibility of expensive break/economic costs if, during the fixed interest rate period, client(s): (a) Repay loan in full; (b) Switch to another product or loan type; (c) Make additional repayments over and above any prescribed limit; (d) Sell the property; (e) or seek further funds.

## Interest only characteristics:

- Higher interest rates may apply to interest only loans as opposed to 'Principal & interest' loans.
- Interest only repayments will not reduce the loan principal.
- Not repaying loan principal will result in the client paying more interest over the loan term.
- After the end of the interest only period, principal and interest repayments will be required and these will be higher than they would have been if the loan had principal and interest repayments throughout the loan term.
- The amount of equity that is built-up in the property securing the loan will be less with an interest only loan.

## Offset account characteristics:

- Feature is not available while the loan is on a fixed rate.
- May only be a partial interest rate offset.
- Typically offset accounts come with annual fees (e.g. \$395 p.a.), so you'll need to consider if the amount you'll save will be greater than this annual fee.
- Higher interest rates may apply to loan products with an offset account.
- A redraw facility on a 'no frills' style home loan can be a cheaper alternative.

### **Redraw:**

- Lender may charge fees for each redraw
- Each redraw may be subject to the lender's discretion
